I. INTRODUCTION

This report represents the findings of the twenty-fourth national compensation survey conducted by the National Society of Professional Engineers. The twenty-four previous surveys have covered the years 1952, 1954, 1956, 1958, 1960, 1962, 1964, 1967, 1969, 1971, 1973, 1975, 1977, 1979, 1981, and annually thereafter. These surveys have proved to be of considerable value to engineering firms, industrial organizations, national engineering organizations, local and state governmental agencies, and the departments of the Federal Government, as well as the United States Congress.

Survey respondents were asked to report their annual base salary from their primary employer as of January 1, 1991, plus additional cash income from that employer (excluding overtime pay) for the preceding calendar year. Income from secondary and/or part-time employment was excluded.

Survey respondents were all members of NSPE, an organization of individual professional engineers. The Society, containing 54 member state and territorial societies and over 535 local chapters, was organized in 1934 to advance the public interest and promote the professional, social, and economic interests of the professional engineer.

NSPE acknowledges with grateful thanks the cooperation of the members of the Society in responding to the questionnaire. Dr. Steven Langer, President of Abbott, Langer & Associates, Chicago-based consultants in personnel management and industrial psychology, designed the survey questionnaire, directed the computer analysis of the data, and prepared the final report.

The survey was conducted under the supervision of the NSPE Professional Employment Committee, chaired by Gerald J. Reihsen, P.E.

II. DEFINITIONS

Income, as defined for this report, constitutes the individual's *annual base salary* from his or her *primary* employer as of January 1, 1991, *plus additional cash income* from the individual's ***primary*** job (including fees, bonuses, and commissions, but excluding overtime pay and income from secondary or part-time employment) during the preceding 12-month period.

In each table, the words "number responding" refer to the usable number of responses from which the statistics were derived for the data line in which that specific number appears.

The term "mean" indicates that the annual compensation of all individuals in a group were added together and the total divided by the number of individuals involved. This measure of central tendency can be unduly influenced by a few very high or very low data. While the mean permits certain statistical calculations, greater consideration should be given to the median for comparison purposes, especially when the sample size is small.

The "median" is the value of the middle item (or the average of the two middle items) of a group of values when they are arrayed from largest to smallest. The advantage of the median is that it provides a measure of central tendency that is not unduly influenced by a few very high or very low data (e.g., atypical annual incomes).

"Quartiles" and "deciles" are measures of dispersion. When all of the incomes are arrayed from the highest to the lowest, the first quartile is that income below which 25% of the incomes fall. Likewise, the third quartile is the figure below which 75% of the incomes fall. Ten percent of the incomes fall below the first decile; 90% below the ninth decile.

All other items are defined in the Instruction Book, which appears in Appendix A.

III. METHODOLOGY

The 1991 questionnaire (reproduced in Appendix A) was mailed to 60,148 members of the National Society of Professional Engineers in January 1991. The total number of questionnaires returned by March 11th was 13,546, a 22.5% response rate. This rate of response compares favorably with the 23.8% response rate in 1990, the 21.7% in 1989, the 23.0% in 1988, and the 24.7% in 1987.

All data were eliminated from the survey if the respondent was on active duty in the Armed Forces, a full-time student, retired, or unemployed at the time of the survey.

In some cases, pay data were not provided, were insufficient, or were obviously erroneous, or the respondent had been unemployed for some part of 1990. These responses (plus those of respondents on active duty in the Armed Forces, full-time students, retirees, and those unemployed at the time of the survey) were eliminated in calculating income statistics. This reduced the sample to 11,790 for this purpose.

For the exhibit on changes in base pay, self-employed individuals were also eliminated. Therefore, 10,288 responses were usable for these tables.

Not every participant provided all of the information requested. Questionnaires were included in the study if they provided sufficient information to be included in at least one table of this report.

Anomalies may occur in the income statistics reported for a few of the smaller sub-groups if one or more survey participants reported incomes considerably different from the usual income of individuals with a common demographic characteristic. Regretfully, it is not possible to identify and delete all such responses from the survey. Fortunately, these cases have no appreciable effect upon the medians or quartiles reported for major sub-groups.

Data for sub-groups of extremely small size lack statistical validity. However, such data can provide a guideline if the data are consistent with related information.

To provide maximum data in the space allocated, the computer program was written to eliminate any line of data for which the sample size was less than five. Further, the computer program was written to replace the first and ninth deciles with dashes whenever the statistics in a line of data were based on information from fewer than 20 respondents and to replace the first and third quartiles with dashes whenever the statistics in a line of data were based on information from fewer than 10 respondents.

IV. INTERPRETING THE DATA

Despite the fact that participation was good, both in number of participants and percentage of participants, it is recommended that data for all pertinent variables be considered simultaneously when the data are interpreted - especially where the sample size of a sub-group is extremely small.

Some respondents may have reported incomes considerably higher or lower than those of the remaining individuals in a sub-group. This would unduly influence the mean for some small sub-groups. Therefore, whenever the sample is small and there is a considerable difference between the mean and median in a line of data, greater weight should usually be given to the median than to the mean.

Sometimes, the information reported in a line of data may appear to be inconsistent with that of related data lines. In such cases, the relative sample size of each data line should be considered. Usually, more confidence should be placed in the data line having the larger sample size. However, the "rule of reason" should govern.

As the definitions imply, one-half of the respondents are paid more than the median, one-quarter more than the third quartile, and 10% more than the ninth decile. Naturally, length of service and individual capability play a large part in determining an individual's specific income level. Further, as a matter of policy, many employers deliberately set pay rates above the average to attract and retain the best possible employees. Therefore, the fact that an individual's salary is above some otherwise-appropriate statistic need not be a matter of concern.

V. COMPENSATION

Income

As of January 1, 1991, the median total annual income of participants in the 1991 NSPE survey was $57,000 (including salaries, fees, cash bonuses, and commissions received from the respondents' primary jobs during the preceding 12-month period - but specifically excluding overtime pay). This represents an increase of 2.7% in the 12-month period since the preceding survey. However, during this same period, the Consumer Price Index rose by 5.7%.

Individual incomes vary widely. As Exhibit 1 shows, 10% of respondents earn under $36,900, while 10% earn $102,000 or more.

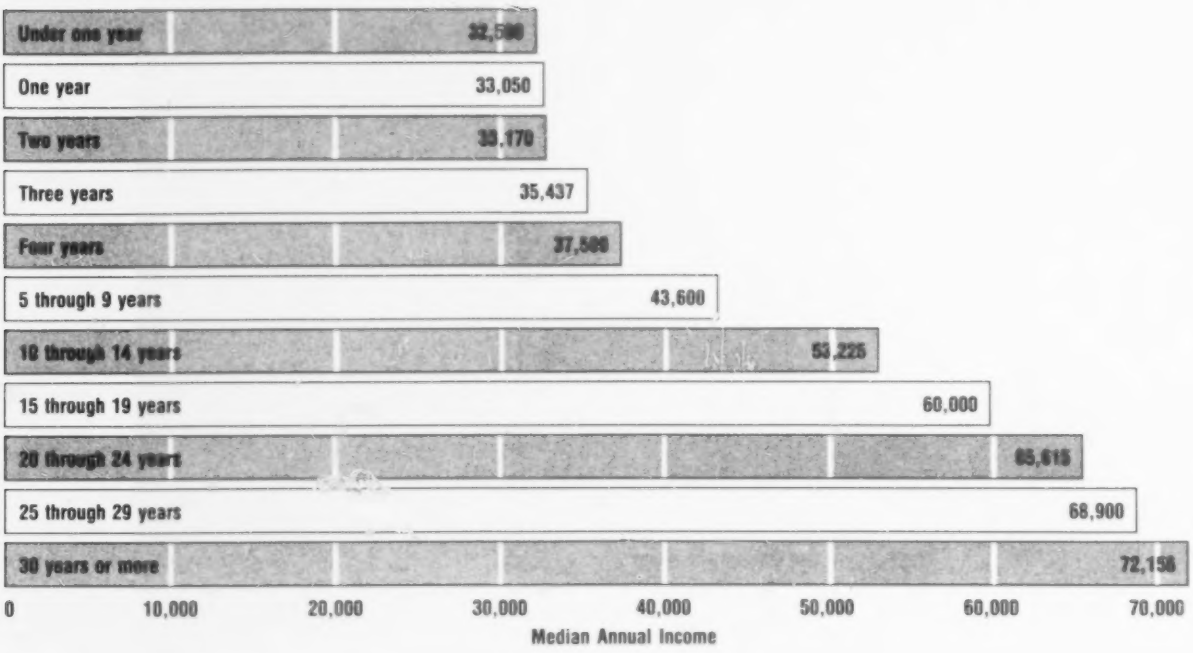
EXHIBIT 2. Income by Length of Experience



Length of Experience

Median income shows a consistent increase with increased engineering experience. As Exhibit 2 reports, the median income of respondents increases regularly from $32,500 for those with under one year of experience (up 5.7%) to $72,156 for those with 30 years of experience or more (up 5.3%). This is a 122.0% "spread," as compared to the 122.8% spread found in the 1990 survey, the 123.8% found in 1989, the 110.1% found in 1988, the 122.2% in 1987, the 110.8% in 1986, the 111.7% in 1985, the 100.0% in 1984, and the 94.2% in 1983. It represents an average increase of about 4.1% per year of experience. This is consistent with findings in this survey series and other engineering studies.

Earnings differences increase with the number of years of experience and are greatest in the most experienced groups. The inter-quartile range (the difference between the first and third quartiles) is the best measure of the income range. It increased from $5,831 (19.5%) for those with under one year of experience to $16,814 (36.4%) for those with 10 - 14 years of experience, $26,823 (49.2%) with 20 - 24 years of experience, and $39,532 (68.8%) with 30 years of experience or more.

The earnings of the lowest-paid group (i.e., the first decile) showed relatively little change regardless of additional experience over 15 years. (This finding is consistent with most previous surveys in this series.) On the other hand, added years of experience among the highest-paid (i.e., the ninth decile) resulted in increased annual earnings of $42,901 (45.3%) from 15 - 19 years of experience to 30 years of experience or more.

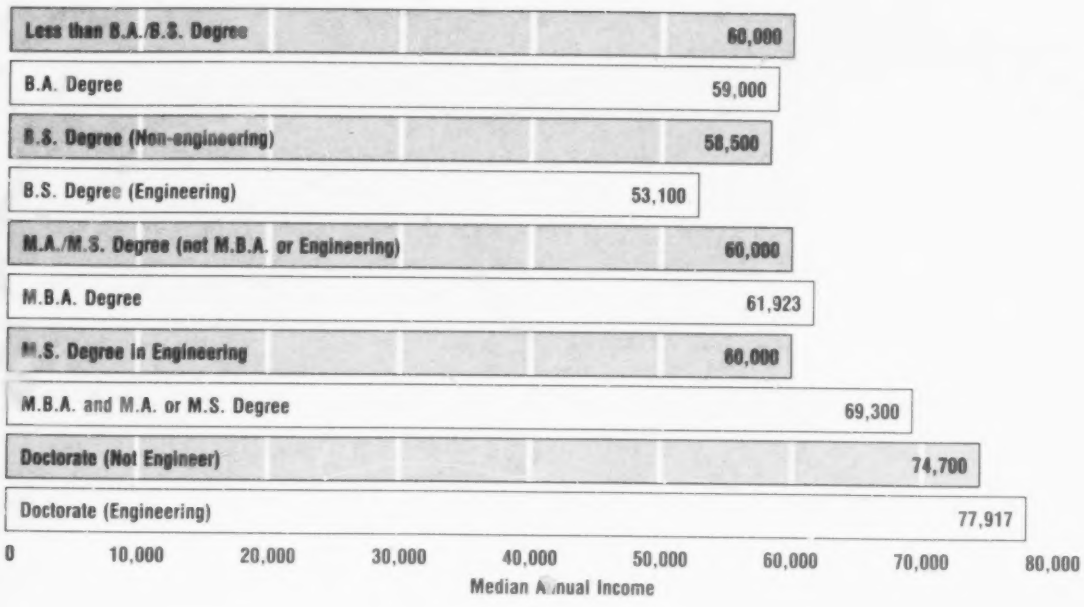
EXHIBIT 3. Income by Level of Education



Level of Education

Exhibit 3 shows graphically median income by level of education attained. As is obvious, increased education in the engineering field results in higher earnings. Respondents holding doctoral degrees in engineering have a median income of $77,917 (up 7.5%). Those with the M.S. in engineering earn a median of $60,000 (up 1.9%). Finally, those with the B.S. in engineering earn $53,100 (also up 1.9%).

Those holding the doctorate in engineering earn 46.7% more than those with a B.S. in engineering. The comparable figures in previous years were 39.2% in 1990, 36.0% in 1989, 35.4 in 1988, 31.0% in 1987, 30.1% in 1986, 25.5% in 1985, 24.5% in 1984, and 24.9% in 1983.

NSPE members holding the M.B.A. degree have higher median incomes than those holding the M.S. in engineering or other master's degrees. The B.A. and the B.S. outside of engineering results in higher earnings than does the B.S. in engineering. However, a higher percentage of these respondents are in executive/administrative jobs, an area that pays better than straight engineering. The apparent anomaly of a higher median income for those with less than a B.A./B.S. degree than those with a B.A. or B.S. degree is due to the higher average length of experience and level of professional responsibility of the former group.

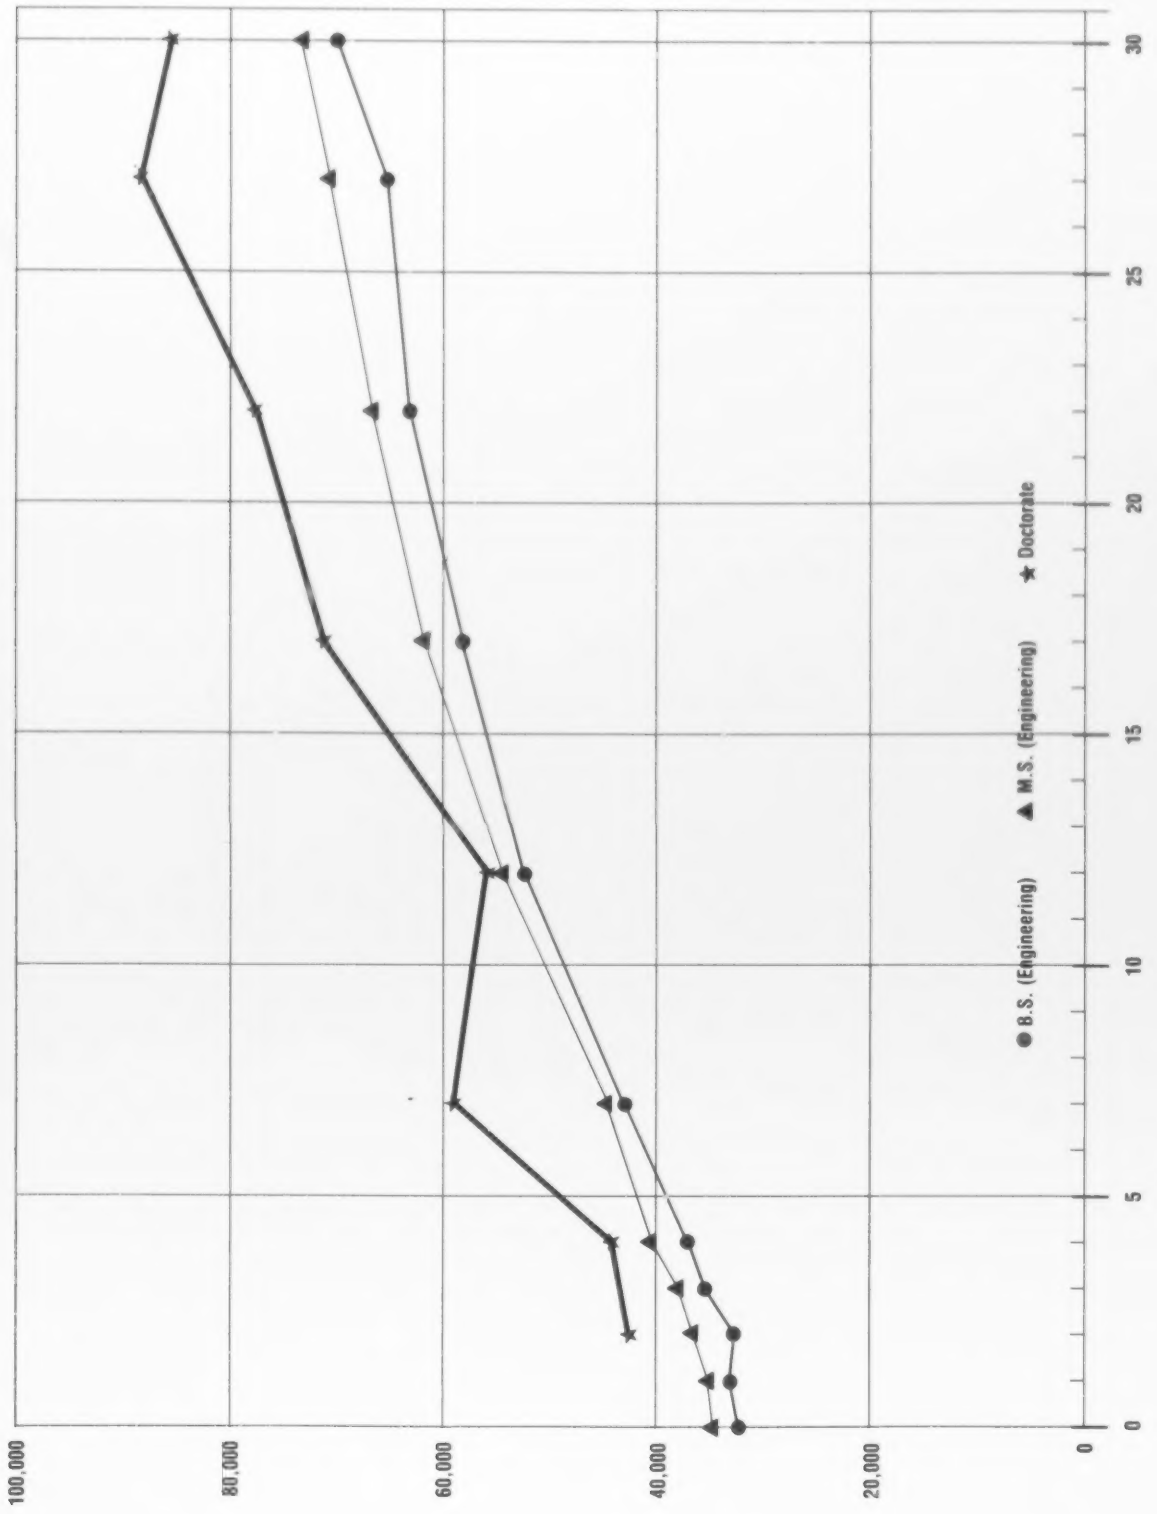
EXHIBIT 4. Income by Length of Experience and Highest Degree



Length of Experience and Highest Degree Earned

Income by engineering experience vs. level of education for three of the largest groups by degree held appears graphically and in tabular form in Exhibit 4. It also appears in tabular form in Appendix B for all degrees investigated.

The curves by median income for the B.S., M.S., and Ph.D. in engineering are fairly smooth and follow the expected relationship, except for a minor anomaly at 30-plus years of experience with the doctorate in engineering.

Between five - nine years of experience (below which there are insufficient data for doctoral degrees for realistic analysis) and 25 - 29 years of experience, the "spreads" of median income for the B.S., M.S., and Ph.D. in engineering are 53.8%, 59.9%, and 49.2%, respectively.

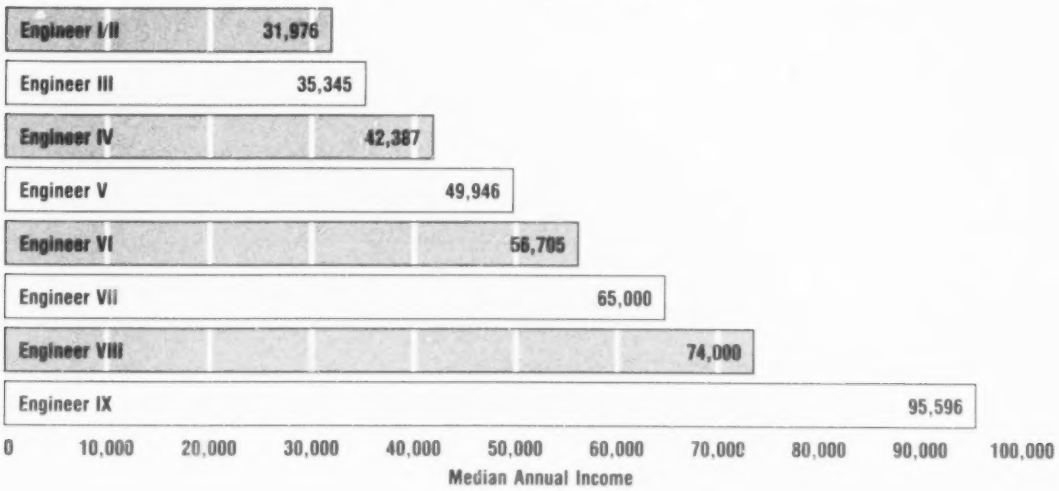
EXHIBIT 5. Income by Level of Professional Responsibility



Level of Professional Responsibility

Of all survey participants, 96.7% were able to match their level of professional responsibility to one of the engineering grades defined in the Instruction Book (see Appendix A). The remaining 3.3% of the respondents did not respond or indicated that their position encompassed or fell between two levels or that their level of professional responsibility was not adequately described.

Naturally, NSPE members fall primarily into the higher grades (Engineer IV through IX). The median member falls into the grade of Engineer VI. (It should be noted that respondents' "self-grading" may not always be accurate, despite the detailed guidelines furnished in this and previous surveys.)

Exhibit 5 reports income by engineering grade. The graph follows the shape expected, rising from a median of $31,976 for Engineer I/II to $95,596 for Engineer IX. This is a 199.0% "spread," less than the 225.7%, 220.2%, 208.5%, 200.0% "spreads" found in 1990, 1989, 1988, and 1987 but greater than the 182.2%, 174.5%, and 162.0% found in 1986, 1985, and 1984, respectively. (A more extensive exhibit reporting income by engineering grade vs. length of experience appears in Appendix B.)

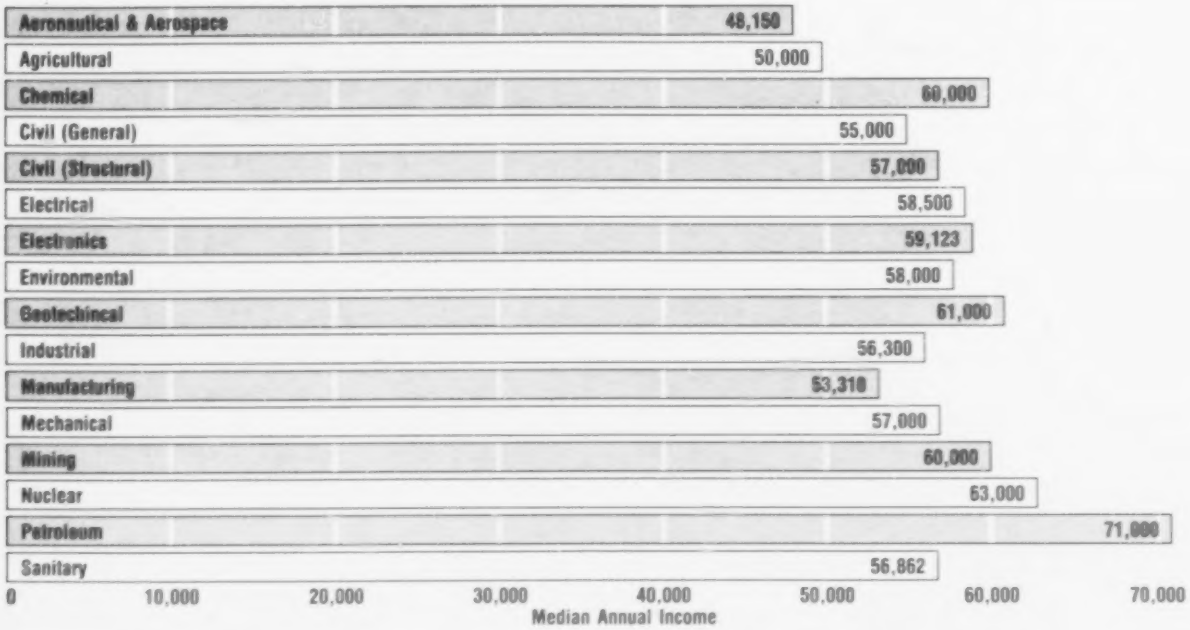
EXHIBIT 6. Income by Major Branch of Engineering



Major Branch of Engineering

The highest median income by major branch of engineering goes to those respondents working in petroleum engineering ($71,000). This group is followed by those in nuclear ($63,000), geotechnical ($61,0000), chemical and mining (both $60,000), and electronics, electrical, environmental, mechanical, and civil (primarily structural) engineering (all in the $57,000 - $59,123 range).

At the other end of the income spectrum are those employed in aeronautical & aerospace engineering ($48,150). They are preceded by those in agricultural ($50,000), manufacturing ($53,310), civil (general - $55,000), industrial ($56,300), and sanitary engineering ($56,862).

Exhibit 6 reports income statistics both graphically and in tabular form. (More extensive exhibits reporting income by major branch of engineering vs. other demographic variables appear in Appendix B.)

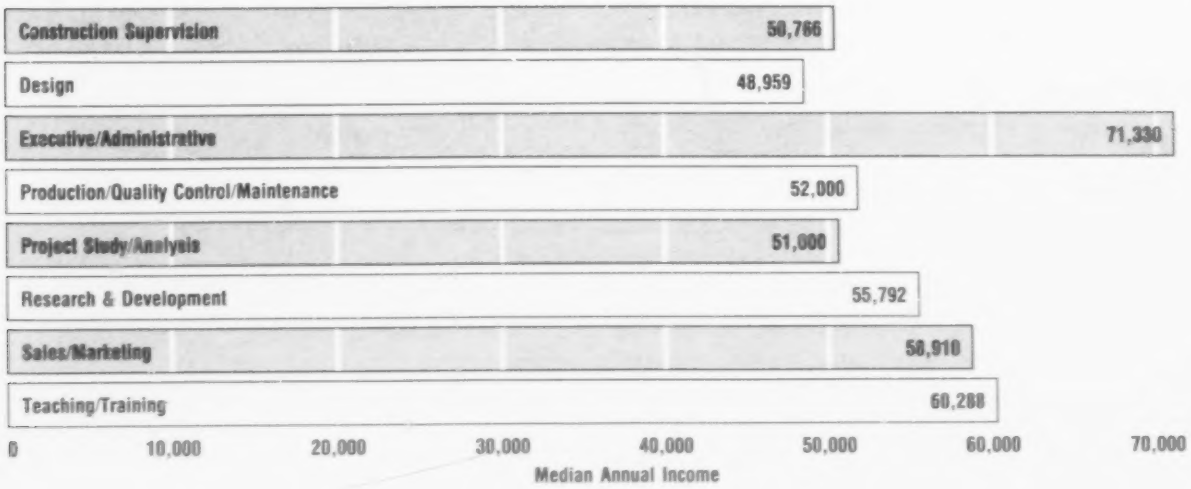
EXHIBIT 7. Income by Job Function



Job Function

As in the past, median annual income is highest for respondents in executive/administrative job functions ($71,330). This group is followed by those in teaching/training ($60,288), sales/marketing ($58,910), and R&D ($55,792).

The lowest median income is received by those in design ($48,959). This group is preceded by those in construction supervision ($50,766), project study & analysis ($51,000), and production/quality control/maintenance ($52,000).

A comparison of median incomes by job function appears in Exhibit 7. An expanded version of this exhibit (with "breakouts" of income by length of experience, metropolitan area, etc.) appears in Appendix B.

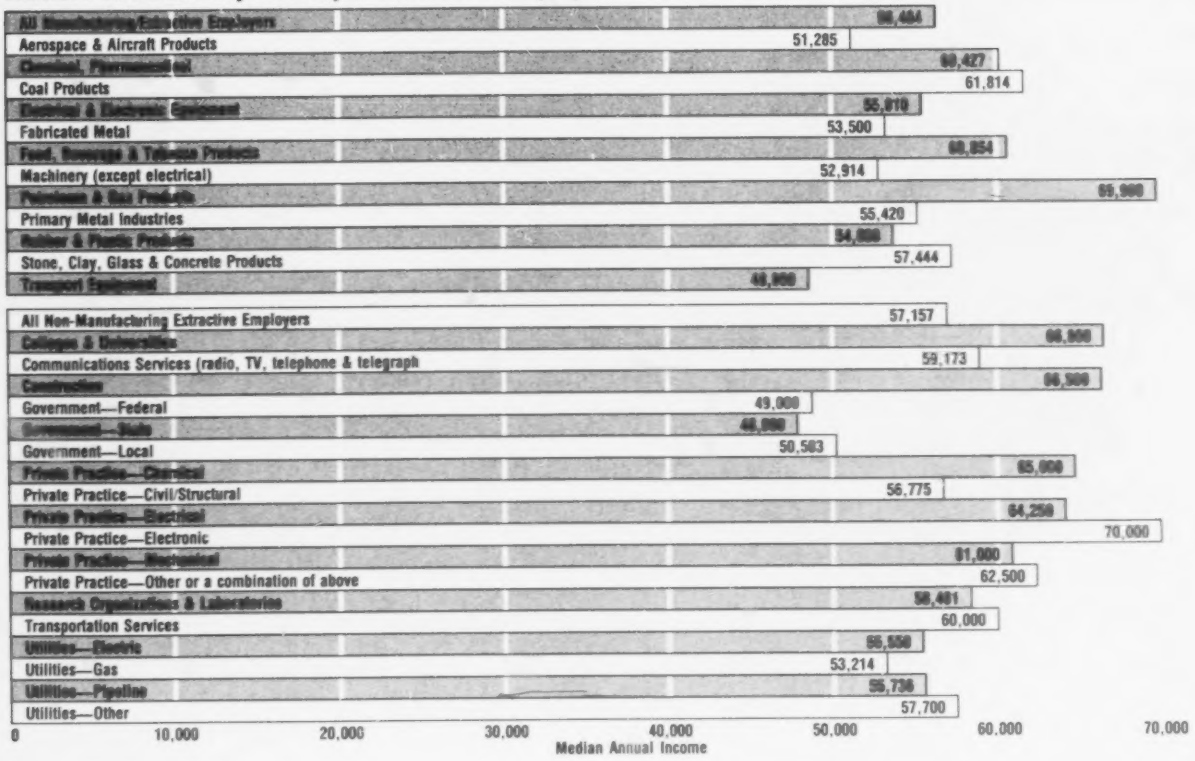
EXHIBIT 8. Income by Industry or Service of Employer



Industry or Service of Employer

Respondents employed in petroleum, natural gas, and coal products; colleges & universities; construction & real estate development; and private practice (primarily electronics, chemical, electrical, or mechanical engineering) have the highest median incomes of the 30 industry groups studied.

Those receiving the lowest median incomes are employed by federal, state, and local governments; manufacturers of transportation equipment, aerospace & aircraft products, and machinery; and utilities (gas).

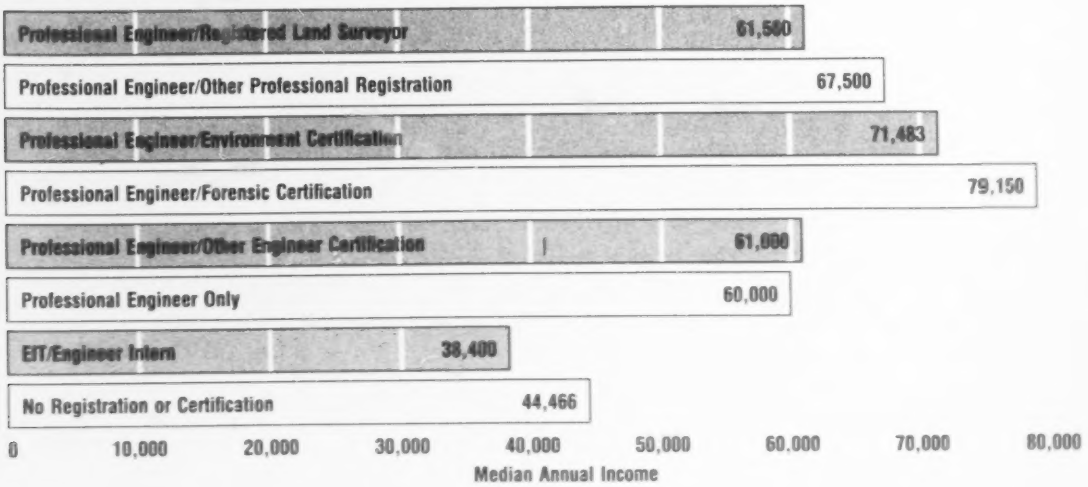
EXHIBIT 9. Income by Registration Status



Registration Status

Only 2.7% of respondents are not registered or certified. Naturally, the vast majority of respondents (84.0%) are P.E.'s (8.9% are both P.E.'s and Registered Land Surveyors, 1.7% hold both the P.E. and certification in environmental engineering, .5% the P.E. and certification in forensic engineering, 3.6% the P.E. and certification in some other engineering specialty, and 2.4% the P.E. and some other registration). The remaining participants are Engineers-in-Training/ Engineer Interns (who compose 13.3% of the sample).

Exhibit 9 reports income by registration-certification status. Those respondents who are P.E.'s certified in Forensic Engineering enjoy the highest median annual income ($79,150). P.E.'s who are also certified in Environmental Engineering ($71,483), have some other professional registration ($67,500), are Registered Land Surveyors ($61,560), or are certified in some other engineering specialty ($61,000) follow. P.E.'s without other licensure have a median income of $60,000. Unregistered-uncertified individuals have a median income of $44,466. Engineers-in-Training/Engineer Interns have the lowest median income ($38,400).

Extensive exhibits containing data on income by registration status vs. other demographic variables appear in Appendix B.

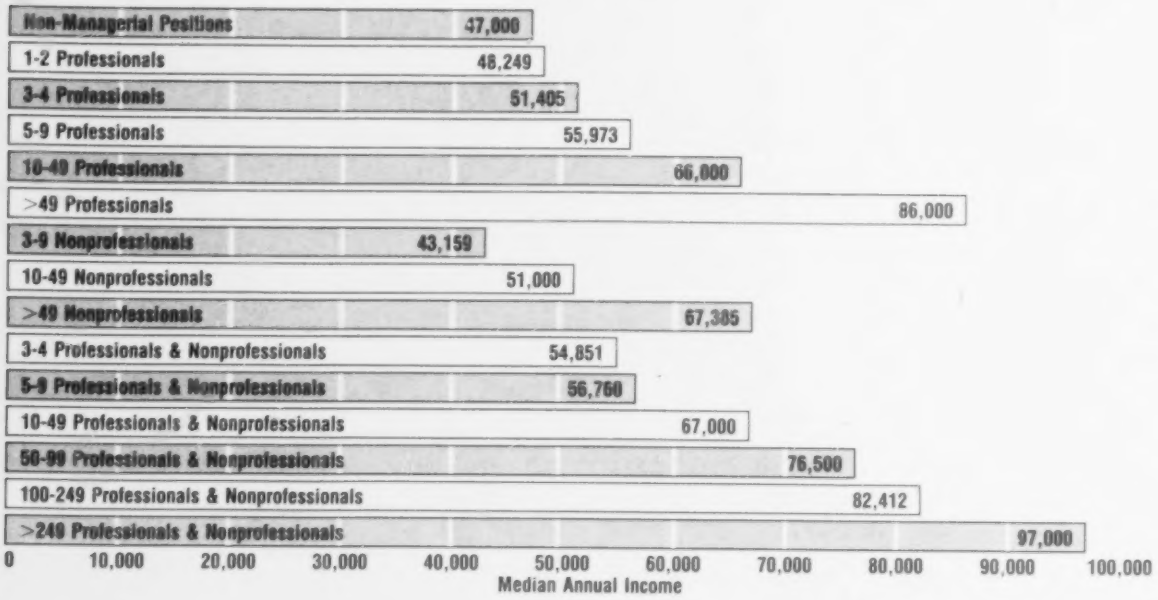
EXHIBIT 10. Income by Supervisory/Managerial Responsibility



Supervisory/Managerial Responsibility

Almost 79% of the respondents have supervisory or managerial responsibility. This demographic variable plays an important part in determining income.

Income increases regularly with increased supervisory/managerial responsibility. However, the median income of non-supervisory positions is slightly higher than that of positions with the lowest level of supervisory responsibility over non-professionals (which may, in part, represent foreman positions). Supervision of engineers & other professionals results in higher earnings than does supervision of sub-professional personnel, given the same number of subordinates.

P.E.'s in non-supervisory positions have a median income of $47,000 (up 2.7% in the past year), while the median income of those supervising/managing only engineers, scientists and/or technologists increases regularly from $48,249 (up 0.7%) for those who supervise one or two such professionals to $86,000 (up 7.0%) for those who direct the activities of 50-plus professionals.

Supervision of both professionals and non-professionals results in a median income of $54,851 with only three or four subordinates. Income increases regularly to $97,000 for the group that manages 250 or more such subordinates.

These data are displayed in Exhibit 10. Additional information on this variable appears in Appendix B.

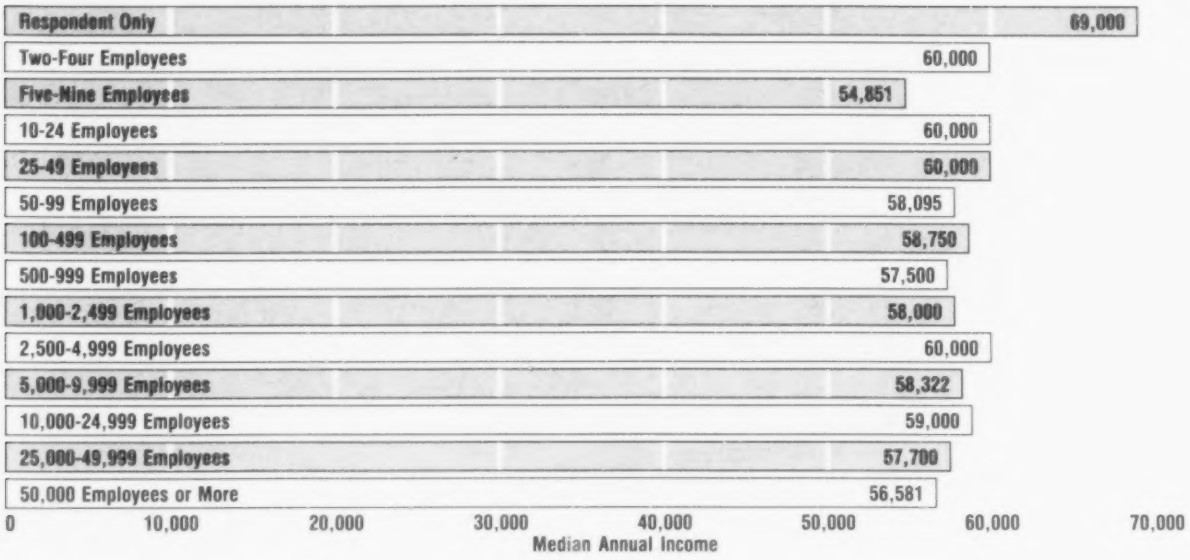
EXHIBIT 11. Income by Size of Organization



Size of Organization

As Exhibit 11 shows, the median income of respondents in one-person organizations (presumably independent consultants) is highest of all organization sizes studied, with a significant drop in median income for the next-larger organization-size group.

In 1986, the survey found that, after that significant drop, median income increased fairly regularly but quite moderately through the 10,000 - 19,999-employee group. Thereafter, median income declined slightly. However, the results of this survey show a bimodal distribution, with peaks at 10 - 49 employees and 2,500 - 4,999 employees.

The income statistics for this demographic variable appear in the table below, with a more extensive analysis in Appendix B.

EXHIBIT 12. Income by Region (Metropolitan Areas Included)

Geographic Variations

Exhibit 12 reports income by geographic region (with regions including metropolitan areas surveyed). As the data indicate, the highest median income is in Region 1, the northeastern states ($61,327 - up 1.5%) and Region 6, the Pacific and western states ($60,000 - up 3.0%). The lowest median income is found in Region 4, primarily the Great Plains States ($51,780 - up 3.6%).

EXHIBIT 13. Income by Region (Metropolitan Areas Excluded)

As Exhibit 13 shows, when median income data by region are analyzed *excluding* the metropolitan areas that were surveyed (listed in Exhibit 14), the relationship reported above does not change.

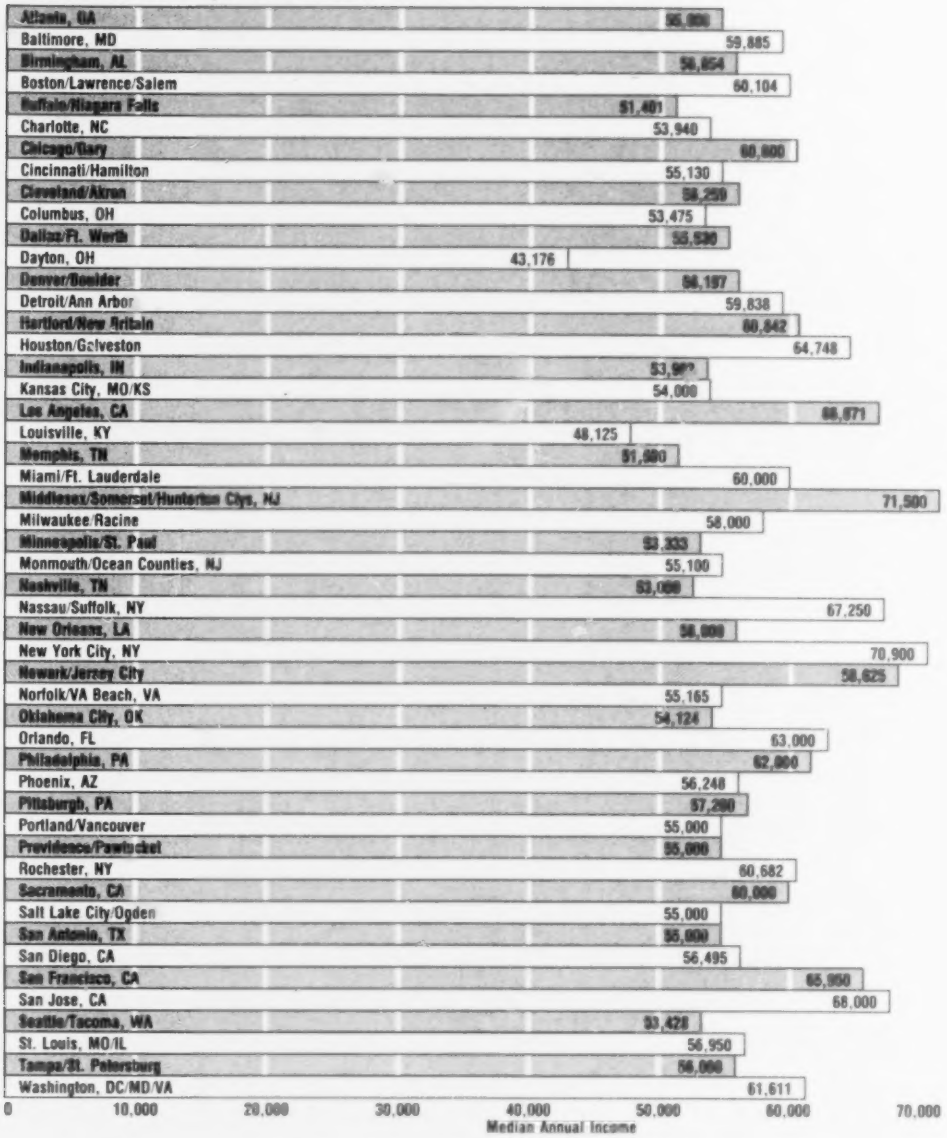
EXHIBIT 14. Metropolitan Area



The income data received were also analyzed by metropolitan area. The highest median income is found in Middlesex/Somerset/Hunterdon Counties (NJ) & vicinity ($71,500). It is followed by New York City ($70,900), Newark/Jersey City (NJ) & vicinity ($68,625), San Jose (CA) & vicinity ($68,000), Nassau/Suffolk Counties (NY) & vicinity ($67,250), Los Angeles/Anaheim/Long Beach/Riverside (CA) & vicinity ($66,871), and San Francisco/Oakland (CA) & vicinity ($65,950).

The lowest median incomes found in this study of 50 metropolitan areas are in Dayton/Springfield (OH) & vicinity ($43,176), Louisville (KY/IN) & vicinity ($48,125), Buffalo/Niagara Falls (NY) & vicinity ($51,401), Memphis (TN/AR/MS) & vicinity ($51,500), Nashville (TN) & vicinity ($53,000), and Minneapolis/St. Paul (MN) & vicinity ($53,333).

The median incomes in the remaining metropolitan areas surveyed range from $53,428 to $64,748.

Additional statistics on income by metropolitan area appear on the next page and in Appendix B.

EXHIBIT 15. Income by Gender

While information regarding the gender of respondents has been requested in the past, there have not been enough data for meaningful analysis. Ever in this year's survey, insufficient data exist to substantiate any final conclusions. However, to the degree that the data permit, some comments will be made herein.

When limited to respondents who are employed full-time as salaried employees, the median income of female engineers ($42,000) is only 76% of that of male engineers ($55,030). However, when the data are analyzed further, by length of experience, female engineers have a higher median income than male engineers for the first two years of experience; thereafter, male engineers have a slight advantage. For example, with both five - nine and 10 - 14 years of experience (the two ranges covering the majority of female engineers reporting), female engineers make 97% as much as male engineers.

When analyzed still further, by length of experience and level of education simultaneously, much the same relationship is found. When limited to the B.S. in engineering and the same two ranges of experience, female engineers earn 97% and 98% as much as male engineers.

Tabular comparisons of median income by gender vs. education and experience, limited to those lines of data which included a minimum of five female engineers, appear in Exhibit 15 below.

VI. MISCELLANEOUS

Increase in Base Salary

As shown in Exhibit 15, 5.9% of respondents were promoted during 1990. An additional 3.7% changed employers during that year. Of the remaining responses to this question, 0.9% reported a decrease in base salary during 1990 and 11.0% reported no change in salary. The median increase for those who received a raise (without being promoted or changing employers) was 5.7%. The middle 50% of increases ranged from 4.1% to 7.9%.

Economic "Health" of Employer

As is shown in Exhibit 17, 33.3% of respondents reported that the economic health of their employers was much improved or somewhat improved since January 1, 1990. A slightly smaller percentage (29.2%) reported that their employers' economic condition was somewhat worse or much worse than on January 1, 1990.

Somewhat improved	2,964	25.6
Little or no change	4,340	37.5
Somewhat worse	2,720	23.5
Much worse	656	5.7

Almost one-half (45.1%) predicted that the condition of their employers will be much improved or somewhat improved by January 1, 1992. Only 16.3% anticipate that it will be somewhat or much worse. (See Exhibit 18.)

EXHIBIT 18. Future Economic "Health" of Employer

Engineering Manpower Levels

As shown in Exhibit 19, over one-third of respondents (36.3%) reported that the number of engineers employed by their organizations increased between January 1, 1990 and January 1, 1991. A smaller percentage (23.7%) reported that the number of engineers employed by their organizations decreased during that time.

EXHIBIT 19. Past Engineering Manpower Levels

	Frequency	Percent
10% increase or more	1,304	11.7
5% - 9.9% increase	987	8.9
Under 5% increase	1,743	15.7
No change	4,444	40.0
Less than 5% decrease	1,192	10.7
5% - 9.9% decrease	634	5.7
10% decrease or more	808	7.3

The prediction of respondents regarding engineering manpower levels during 1991 was even more favorable. Over four-tenths (44.7%) predicted that engineering employment levels in their organizations will be higher on January 1, 1992 than on January 1, 1991. In contrast, only 14.6% predicted that engineering employment levels in their organizations will be lower on January 1, 1992. (See Exhibit 20.)

EXHIBIT 20. Future Engineering Manpower Levels

	Frequency	Percent
10% increase or more	1,116	10.2
5% - 9.9% increase	1,181	10.8
Under 5% increase	2,590	23.7
No change	4,445	40.7
Less than 5% decrease	869	7.9
5% - 9.9% decrease	404	3.7
10% decrease or more	327	3.0

APPENDIX A. Survey Instruction Book

Instruction Book

A. ***Employment Status.*** As of January 1, 1991, what was your employment status? (Please select the ***one*** response below which ***best*** describes your status at that time and post the ***code number*** for it in the space provided under A ***on the Survey Reply Form***.)

- [0] Self-employed full-time (owner/principal).
- [1] Retired, self-employed full-time.
- [2] Employed full-time (salaried employee).
- [3] Retired, employed full-time (salaried employee).
- [4] On college/university faculty.
- [5] Full-time student.
- [6] On active duty in the Armed Forces.
- [7] Retired and/or working part-time.
- [8] Unemployed.
- [9] Other (***not*** adequately described above).

B. ***Unemployment Data.*** During the period from January 1, 1990 to January 1, 1991, how long were you unemployed? Post the ***code number*** under ***B*** on the Survey Reply Form.

- [1] ***Not*** unemployed (employed or self-employed all year/retired/full-time student).
- [2] Employed all ***academic*** year.
- [3] Unemployed ***under*** one month.
- [4] Unemployed ***at least*** one month but ***less than*** three months.
- [5] Unemployed three months or more.

C. ***Base Salary from Primary Job.*** As of January 1, 1991, what was your ***base annual salary*** from your ***primary full-time*** job? Post it in the ***six*** boxes under C ***on the Survey Reply Form***. (***Exclude*** fees, overtime pay, bonuses, and commissions. ***Also*** exclude income from ***secondary*** employment - such as part-time teaching, part-time consulting, etc.)

NOTE: If your base annual salary was ***less than*** $10,000, post it with ***two*** preceding zeros. For example, if your base annual salary was $9,525, it should be posted as follows: [0][0][9][5][2][5]

If your base annual salary was ***between*** $10,000 and $99,999, post it with ***one*** preceding zero. For example, if your base annual salary was $27,375, it should be posted as follows: [0][2][7][3][7][5]

If your base annual salary was $100,000 or ***more***, post it ***without any preceding zeros***. For example, if your base annual salary was $137,925, it should be posted as follows: [1][3][7][9][2][5]

NOTE: If ***no*** base salary, fill in ***all six boxes*** with zeros.

D. ***Other Cash Compensation from Primary Employment.*** During the period from January 1, 1990 to January 1, 1991, what ***additional cash income*** did you receive from your ***primary*** job? (***Include*** fees, bonuses, and commissions but ***exclude*** salary, overtime pay, and income from secondary or part-time employment.)

NOTE: If your fees, bonuses, and commissions totaled ***between*** $10 and $99, post it with ***four*** preceding zeros. For example, if your fees, bonuses, and commissions totaled $75, the total should be posted as follows: [0][0][0][0][7][5]

If your fees, bonuses, and commissions totaled ***between*** $100 and $999, post it with ***three*** preceding zeros. For example, if your fees, bonuses, and commissions totaled $825, the total should be posted as follows: [0][0][0][8][2][5]

If your fees, bonuses, and commissions totaled $1,000 or ***more***, use the same posting system as in C above.

NOTE: If you received ***no*** fees, bonuses, or commissions, fill in ***all six boxes*** with zeros.

E. ***Length of Experience.*** In the ***two*** boxes under ***E*** on the Survey Reply Form, post the ***total*** number of years of professional experience you have had in the engineering field, including ***related*** managerial experience. NOTE: If ***less than*** one year, post ***two*** zeros; if ***one through nine*** years, precede with ***one*** zero.

F. ***Highest Degree Earned.*** (Please ***exclude*** honorary degrees.)

- [11] ***Less than*** a B.A./B.S. Degree.
- [12] B.A. Degree.
- [13] B.S. Degree (non-engineering).
- [14] B.S. Degree (engineering).
- [15] M.A./M.S. Degree (***not*** M.B.A. or engrg.).
- [16] M.B.A. Degree.
- [17] M.S. Degree (engineering).
- [18] M.B.A. ***and*** an M.A. or M.S. Degree.
- [19] Doctorate (non-engineering).
- [20] Doctorate (engineering).
- [21] Other (***not*** adequately described above).

G. ***Major Branch of Engineering.*** In the ***two*** boxes under ***G*** on the Survey Reply Form, post the ***code number*** which identifies your ***major*** branch of engineering work (as of January 1, 1991).

- [11] Aeronautical & Aerospace.
- [12] Agricultural.
- [13] Chemical.
- [14] Civil (general).
- [15] Civil (***primarily*** structural).
- [16] Electrical.
- [17] Electronics.
- [18] Industrial.
- [19] Manufacturing.
- [20] Mechanical.
- [21] Nuclear.
- [22] Petroleum.
- [23] Sanitary.
- [24] Environmental.
- [ ] ***Other*** or a ***combination*** of branches (please leave Item "G" blank on the Survey Reply Form but describe your major branch of engineering in the special space provided on the Survey Reply Form.

H. Level of Professional Responsibility. Under H on the Survey Reply Form, post the ***code number*** below which ***best*** describes your level of professional responsibility as of January 1, 1991.
Note: If your level of professional responsibility is ***not*** adequately described below, post a 1 ([1]).

	[2] ENGINEER I/II	[3] ENGINEER III	[4] ENGINEER IV	[5] ENGINEER V
Equivalent Federal General Schedule Grade*	GS-5, 7	GS-9	GS-11	GS-12
General Characteristics	This is the entry level for professional work. Performs assignments designed to develop professional work knowledges and abilities, requiring application of standard techniques, procedures, and criteria in carrying out a sequence of related engineering tasks. Limited exercise of judgement is required on details of work and in making preliminary selections and adaptations of engineering alternatives.	Independently evaluates, selects, and applies standard engineering techniques, procedures, and criteria, using judgement in making minor adaptations and modifications. Assignments have clear and specified objectives and require the investigation of a limited number of variables. Performance at this level requires developmental experience in a professional position or equivalent graduate level education.	As a fully competent engineer in all conventional aspects of the subject matter of the functional area of the assignments, plans and conducts work requiring judgement in the independent evaluation, selection, and substantial adaptation and modification of standard techniques, procedures, and criteria. Devises new approaches to problems encountered. Requires sufficient professional experience to assure competence as a fully trained worker or, for positions primarily of a research nature, completion of all requirements for a doctoral degree may be substituted for experience.	Applies intensive and diversified knowledge of en neering principles and practices in broad areas assignments and related fields. Makes decisions ind pendently on engineering problems and methods, a represents the organization in conferences to reso important questions and to plan and coordin work. Requires the use of advanced techniques a the modification and extension of theories, prece and practices of his field and related sciences a disciplines. The knowledge and expertise required this level of work usually result from progress experience.
Direction Received	Supervisor screens assignments for unusual or difficult problems and selects techniques and procedures to be applied on nonroutine work. Receives close supervision on new aspects of assignments.	Receives instructions on specific assignment objectives, complex features, and possible solutions. Assistance is furnished on unusual problems and work is reviewed for application of sound professional judgement.	Independently performs most assignments with instructions as to the general results expected. Receives technical guidance on unusual or complex problems and supervisory approval on proposed plans for projects.	Supervision and guidance related largely to over objectives, critical issues, new concepts, and pol matters. Consults with supervisor concerning unus problems and developments.
Typical Duties & Responsibilities	Using prescribed methods, performs specific and limited portions of a broader assignment of an experienced engineer. Applies standard practices and techniques in specific situations, adjusts and correlates data, recognizes discrepancies in results, and follows operations through a series of related detailed steps or processes.	Performs work which involves conventional types of plans, investigations, surveys, structures, or equipment with relatively few complex features for which there are precedents. Assignments usually include one or more of the following: Equipment design and development, test of materials, preparation of specifications, process study, research investigations, report preparation, and other activities of limited scope requiring knowledge of principles and techniques commonly employed in the specific narrow area of assignments.	Plans, schedules, conducts, or coordinates detailed phases of the engineering work in a part of a major project or in a total project of moderate scope. Performs work which involves conventional engineering practice but may include a variety of complex features such as conflicting design requirements, unsuitability of conventional materials, and difficult coordination requirements. Work requires a broad knowledge of precedents in the specialty area and a good knowledge of related specialties.	One or more of the following: *1)* In a supervis capacity, plans, develops, coordinates, and directs large and important engineering project or a numb of small projects with many complex features. substantial portion of the work supervised is comp rable to that described for engineer IV. *2)* individual researcher or worker, carries out compl or novel assignments requiring the development new or improved techniques and procedures. Wo is expected to result in the development of new improved techniques and procedures. Work expected to result in the development of new refined equipment, materials, processes, produc and/or scientific methods. *3)* As staff specialis develops and evaluates plans and criteria for variety of projects and activities to be carried out others. Assesses the feasibility and soundness proposed engineering evaluation tests, products, equipment when necessary data are insufficient confirmation by testing is advisable. Usually perfor as a staff advisor and consultant as to a technic specialty, a type of facility or equipment, or program function.
Responsibility For Direction of Others	May be assisted by a few aides or technicians.	May supervise or coordinate the work of draftsmen, technicians, and others who assist in specific assignments.	May supervise or coordinate the work of engineers, draftsmen, technicians, and others who assist in specific assignments.	Supervises, coordinates, and reviews the work of small staff of engineers and technicians, estimat manpower needs, and schedules and assigns work meet completion date. Or, as individual research or staff specialist, may be assisted on projects other engineers or technicians.
Typical Position Titles	Junior Engineer, Associate, Detail Engineer, Engineer-in-Training, Assistant Research Engineer, Construction Inspector.	Engineer or Assistant Engineer, Project, Plant, Office, Design, Process, Research, Inspector, Engineering Instructor.	Engineer or Assistant Engineer, Resident, Project, Plant, Office, Design, Process, Research, Chief Inspector, Assistant Professor.	Senior or Principal Engineer, Resident, Project, O fice, Design, Process, Research, Assistant Divisi Engineer, Associate Professor, Project Leader.

*Shown for comparison of job characteristics and responsibility levels only, not to indicate desirable salary levels.

6 ENGINEER VI	7 ENGINEER VII	8 ENGINEER VIII	9 ENGINEER IX
GS-13	GS-14	GS-15	Senior Executive Service GA-16, 17, 18
He full technical responsibility for interpreting, organizing, directing, and coordinating assignments. Plans and develops engineering projects concerned with unique or controversial problems which have an important effect on major organization programs. This involves exploration of subject area, definition of scope and selection of problems for investigation and development of novel concepts and approaches. Maintains liaison with individuals and units within or outside his organization, with responsibility for acting independently on technical matters pertaining to his field. Work at this level usually requires extensive progressive experience.	Make decisions and recommendations that are recognized as authoritative and have an important impact on extensive engineering activities. Initiates and maintains extensive contacts with key engineers and officials of other organizations and companies, requiring skill in persuasion and negotiation of critical issues. At this level, individuals will have demonstrated creativity, foresight, and mature engineering judgement in anticipating and solving unprecedented engineering problems, determining program objectives and requirements, organizing programs and projects, and developing standards and guides for diverse engineering activities.	Makes decisions and recommendations that are recognized as authoritative and have a far-reaching impact on extensive engineering and related activities of the company. Negotiates critical and controversial issues with top level engineers and officers of other organizations and companies. Individuals at this level demonstrate a high degree of creativity, foresight, and mature judgement in planning, organizing, and guiding extensive engineering programs and activities of outstanding novelty and importance.	An engineer in this level is either *1)* in charge of programs so extensive and complex as to require staff and resources of sizeable magnitude (e.g., research and development, a department of government responsible for extensive engineering programs, or the major component of an organization responsible for the engineering required to meet the objectives of the organization); or *2)* is an individual researcher or consultant who is recognized as a national and/or international authority and leader in an area of engineering or scientific interest and investigation.
Supervision received is essentially administrative, with assignments given in terms of broad general objectives and less.	Supervision received is essentially administrative, with assignments given in terms of broad general objectives and limits.	Receives general administrative direction.	
One or more of the following: *1)* In a supervisory capacity, plans, develops, coordinates, and directs a number of large and important projects or a project of major scope and importance, or *b)* is responsible for the entire engineering program of an organization when the program is of limited complexity and scope. The extent of his responsibilities generally require a few (3 to 5) subordinate supervisors or team leaders with at least one in a position comparable to Engineer V. *2)* As individual researcher or worker, conceives, plans, and conducts research in problem areas of considerable scope and complexity. The problems must be approached through a series of complete and conceptually related studies, are difficult to define, require unconventional or novel approaches, and require sophisticated research techniques. Available guides and precedents contain critical gaps are only partially related to the problem or may be largely lacking due to the novel character of the project. At this level, the individual researcher generally will have contributed inventions, new designs, or techniques which are of material significance in the solution of important problems. *3)* As a staff specialist, serves as the technical specialist for the organization (division or company) in the application of advanced theories, concepts, principles, and processes for an assigned area of responsibility (i.e. subject matter, function, type of facility or equipment, or product). Keeps abreast of new scientific methods and developments affecting his organization for the purpose of recommending changes in emphasis of programs or new programs warranted by such developments.	One or both of the following: *1)* In a supervisory capacity, is responsible for *a)* an important segment of the engineering program of an organization with extensive and diversified engineering requirements, or *b)* the entire engineering program of an organization when it is more limited in scope. The overall engineering program contains critical problems the solution of which requires major technological advances and opens the way for extensive related development. The extent of his responsibilities generally requires several subordinate organizational segments or teams. Recommends facilities, personnel, and funds required to carry out programs which are directly related with and directed toward fulfillment of overall organization objectives. *2)* As individual researcher or consultant, is a recognized leader and authority in his organization in a broad area of specialization or in a narrow but intensely specialized field. Selects research problems to further the organization's objectives. Conceives and plans investigations of broad areas of considerable novelty and importance for which engineering precedents are lacking in areas critical to the overall engineering program. Is consulted extensively by associates and others with a high degree of reliance placed on his scientific interpretations and advice. Typically, will have contributed inventions, new designs, or techniques which are regarded as major advances in the field.	One or both of the following: *1)* In a supervisory capacity, is responsible for *a)* an important segment of a very extensive and highly diversified engineering program, or *b)* the entire engineering program when the program is of moderate scope. The programs are of such complexity that they are of critical importance to overall objectives, include problems of extraordinary difficulty that often have resisted solution, and consist of several segments requiring subordinate supervisors. Is responsible for deciding the kind and extent of engineering and related programs needed for accomplishing the objectives of the organization, for choosing the scientific approaches, for planning and organizing facilities and programs, and for interpreting results. *2)* As individual researcher or consultant, formulates and guides the attack on problems of exceptional difficulty and marked importance to the organization or industry. Problems are characterized by their lack of scientific precedents and source material, or lack of success of prior research and analysis so that their solution would represent an advance of great significance and importance. Performs advisory and consulting work for the organization as a recognized authority for broad program areas or in an intensely specialized area of considerable novelty and importance.	
Plans, organizes, and supervises the work of a staff of engineers and technicians. Evaluates progress of the staff and results obtained, and recommends major changes to achieve overall objectives. Or, as individual research or staff specialist, may be assisted on individual projects by other engineers or technicians.	Directs several subordinate supervisors or team leaders, some of whom are in positions comparable to Engineer VI or, as individual researcher or consultant, may be assisted on individual projects by other engineers and technicians.	Supervises several subordinate supervisors or team leaders, some of whose positions are comparable to Engineer VII, or individual researchers, some of whose positions are comparable to Engineer VII and sometimes Engineer VIII. As an individual researcher or consultant, may be assisted on individual projects by other engineers or technicians.	
Senior or Principal Engineer, Division or District Engineer, Production Engineer, Assistant Division, District or Chief Engineer, Consultant, Professor, City or County Engineer.	Principal Engineer, Division or District Engineer, Department Manager, Director or Assistant Director of Research, Consultant, Professor, Distinguished Professor or Department Head, Assistant Chief or Chief Engineer, City or County Engineer.	Chief Engineer, Bureau Engineer, Director of Research, Department Head or Dean, County Engineer, City Engineer, Director of Public Works, Senior Fellow, Senior Staff, Senior Advisor, Senior Consultant, Engineering Manager.	Director of Engineering, General Manager, Vice President, President, Partner, Dean, Director of Public Works.

I. ***Job Function.*** Which ***one*** of the following ***best*** describes your job function on January 1, 1991?

- 1 Construction Supervision (may include ***some*** design).
- 2 Design.
- 3 Executive/Administrative.
- 4 Production/Quality Control/Maintenance/etc.
- 5 Project Study & Analysis.
- 6 Research & Development.
- 7 Sales/Marketing.
- 8 Teaching/Training.
- 9 ***Other*** (***not*** adequately described above).

J. ***Size of Organization.*** In the ***two*** boxes under J on the Survey Reply Form, post the ***code number*** which indicates the ***total number*** of employees in your ***entire*** company or other employing organization. ***Note: Government employees*** should post ***95*** in the space provided.

- 11 One (myself only).
- 12 Two - four employees.
- 13 Five - nine employees.
- 14 10 - 24 employees.
- 15 25 - 49 employees.

- 21 5,000 - 9,999 employees.
- 22 10,000 - 24,999 employees.
- 23 25,000 - 49,999 employees.
- 24 50,000 employees or more.

K. ***Type of Supervisory Responsibility.*** Under K, post the code number for the statement below which ***best*** describes your supervisory status on January 1, 1991.

- 1 I had no ***consistent*** supervisory responsibility (staff engineer or specialist, consultant, etc.).
- 2 I supervised ***engineers***, ***scientists*** and/or ***technologists*** (without ***significant*** involvement in directing the activities of clerical, construction, maintenance, or production employees).
- 3 I supervised ***clerical***, ***construction***, ***maintenance***, and/or ***production*** employees (without ***significant*** involvement in directing the activities of engineers, scientists, and/or technologists).
- 4 I supervised the types of employees described in ***both*** 2 and 3 above about equally.
- 5 Other (***not*** adequately described above).

L. ***Level of Supervisory Responsibility.*** Under L on the Survey Reply Form, post the ***number*** of employees you supervised or (through subordinate supervisors) directed (***of the type which you specified for Question K***) on January 1, 1991. (If ***none***, post ***three*** zeros. If 1 - 9, ***precede*** with ***two*** zeros. If 10 - 99, ***precede*** with ***one*** zero. If 998 or more, post ***998***.)

M. ***Registration Status.***

- 1 Professional Engineer (P.E.) ***and*** Registered Land Surveyor (L.S.).
- 2 Professional Engineer (P.E.) ***and*** some ***other*** professional registration (RA, MD, CPA, Bar, etc.).
- 3 Professional Engineer (P.E.) ***and*** certification in Environmental Engineering.
- 4 Professional Engineer (P.E.) ***and*** certification in Forensic Engineering.

- 5 Much worse.
- 6 Don't know/can't say.

U. ***Past Engineering Manpower Levels***. How has the number of ***engineers*** employed by your organization changed in the past year?

- 1 10% increase or more
- 2 5% - 9.9% increase.
- 3 Less than 5% increase.
- 4 No change.
- 5 Less than 5% decrease.
- 6 5% - 9.9% decrease.
- 7 10% decrease or more.
- 8 Don't know/can't say.

V. ***Future Engineering Manpower Levels***. What change in ***engineering*** employment levels in your organization would you predict will exist one year from now?

- 1 10% increase or more
- 2 5% - 9.9% increase.
- 3 Less than 5% increase.
- 4 No change.
- 5 Less than 5% decrease.
- 6 5% - 9.9% decrease.
